Openserve Fibre to the Room (FTTR)

Bundled with 1 Gbps broadband

Every partner needs a **connection**

When choosing a Fibre connection for your customer, there are four criteria we believe are the most important:
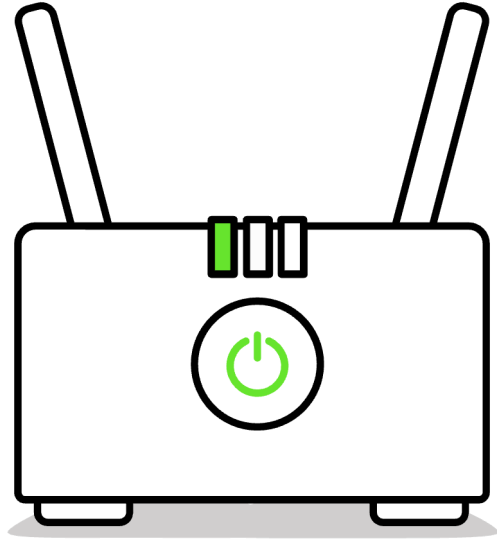

Scale	Speed	Reliability	Flexibility

As SA's national connectivity leader, Openserve meets these criteria and so much more.

We are committed to delivering innovative services and improving the future of our client's businesses.

Committed to our **connections**

Our business is all about building your business, no long-term contracts, easy month-to-month arrangements with tools that provide you with everything you need to manage and grow your customer base.

Our product offering, Fibre to the Room (FTTR) is engineered to bring you a high-speed broadband service, allowing for greater WiFi coverage and stability within the home.

Get your customer connected to SA's most experienced Fibre infrastructure provider.

Openserve's Fibre to the Room is part of our ever-expanding 160,000km plus of national Fibre deployment, all backed by a world class national and international IP network.

Openserve actively monitors market trends, and our product range is subject to speed and other changes in accordance with these trends.
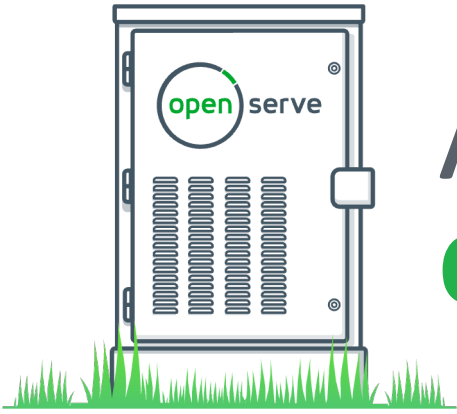

Background **&** Introduction

- **Higher end** users have a requirement for super **high speed broadband coupled with great WiFi** coverage in their typically large residential premises.

- **There is a gap** in the market for FNOs to provide a very high-end broadband product **with an integrated premium WiFi solution.**

- Current offerings of basic WiFi extenders or more advanced **WiFi Mesh solutions are subject to limitations** inherent in WiFi technology, and **does not cater to this very high-end market**.

- Fibre to the Room (FTTR) **is an all-optical WiFi solution**, which directly extends optical fibre cables to each room, achieving high-speed coverage everywhere in the home/business.

- **FTTR coupled with a super high-speed 1 Gbps broadband** product will be a very attractive offer to the high-end market.

Openserve Fibre to the Room | Scale, Speed, Reliability, Flexibility

open serve

Product **Schematic**

- FTTR is an all-optical WiFi solution.
- Optical fibres are extended to each room/area in the home/business.
- The FTTR solution features the Main FTTR Gateway, FTTR Fibre Splitter, Edge ONT, transparent fibres and other optical network components.

A connection for **every purpose**

| High-speed 1 Gbps broadband access	Asymmetrical services (upload configured at 50% of the download speed)	Provisioned over GPON Fibre network	Installed as end-to-end fibre	Backhaul via Metro Ethernet network	No long-term contracts. Month-to-month contracts	Monthly rental includes all equipment in customer's premises (no need for ISP Router)
